

```
graph TD; A[ ] --> B(Jensen's Inequality Insight); B --> C(KEY PROBLEM:); D[ ] --> C; C --> E[ ]; style A fill:none,stroke:none; style D fill:none,stroke:none;
```

Jensen's Inequality Insight

Because of nonlinearity,
minimizing $E[T]$ does NOT
maximize $P(T \leq D)$

KEY PROBLEM:

Deterministic shortest-time routing
does not guarantee on-time reliability
